## 179 accessories

---

### **Emergency accessory sets for use with Evolution locks. Approved to BS EN 179.**

#### **Field of application**

The ASSA 179 series is intended for hinged doors on escape routes where no special exit routines are set. The lock is operated by a one-handed grip which provides a safe exit. The 179 series is suitable for use with several types of lockcase which provide functional solutions for various demands, such as the need to regain entry in case of fire and smoke blocking the normal escape route.

#### **Features**

- Emergency exit device 179 is certified and CE approved according to the European Standard BS EN 179 and the Construction Products Directive 89/106/EEG, and is also approved for mounting in fire resisting doors.
- The lockcase is available with a built-in microswitch which indicates use of the emergency exit handle, and indication for locked/unlocked deadbolt alternative deadlocked latch.
- Available in all standard finishes.

#### **Function**

- The door can always be opened from inside by the emergency exit handle.
- Depending on lockcase model, regaining entry is possible by outside lever handle.
- May be used in combination with electric strikes for integration in access control systems.
- Authorised opening with a key is always possible from both in- and outside without affecting the alarm system.
- Available with breakable plastic security sealing thread to give a clear visual indication when the door has been opened.

#### **Models available**
