"WHEN TIME MATTERS"

Welcome to New Forest Log Cabins. Our extensive range of quality log homes, offices, school classrooms and houses are revolutionising the way professional people live and work. We have designed our product range from the entry level Hobby Room to the spacious family home and in doing so, providing you with choice and unbeatable excellence and value for money built in as standard.

Our aim is to continue to provide top quality log buildings and excellent value for money, which we set out, and have achieved throughout the manufacturing and build process, right from the cutting of the logs from managed forests in Estonia to the care taken to kiln dry the logs so they go into the mill in perfect condition.

We use the very latest computer design and automated Swiss milling and German planning machines that produce the logs, which combined with our high quality fixings to doors and windows gives us a quality finish that we would want in our own homes.

Attention to details is given such as insulation and wood preservation, which come as part of the service so you don't have to worry about the optional extras, we do all that for you. Our team of fitters are the best in the industry and have all served apprentices in log construction, so you can be confident with the peace of mind Guarantee on all material and workmanship.

Our customer promise is to deliver superior products at a price that represents excellent value for money and to assist customers from site design through to implementation with a total focus on customer satisfaction.

**These are the qualities that we believe set us apart from others....!**

Thank you for considering New Forest Log Cabins for the supply of your quality timber buildings. We value your custom and look forward to providing you with our highest level of customer satisfaction.

John Rudd

Sales Director & Founder of New Forest Log Cabins Ltd

About shell houses

### **Optimal model range**

The accordance to house-purchasers' every expectation is observed very carefully with the KONECTA HOME models. In our catalogue we have saunas-summerhouses, functional "economical homes" for young families and also larger dwelling houses to families with more children or simply a feeling for spaciousness.

### **Controlled production process**

The house elements are assembled in dry production rooms, which eliminates the possibility of moisture getting into construction assemblies. We use a technology that gives greater precision in producing elements. Precision is the most important factor in house building quality, because this is the only way to guarantee wind- and temperature proof angle junctions and a solid construction.

### **High-quality materials**

It is not possible to build a good house out of poor-quality materials. KONECTA HOME houses are good houses – we only use high-quality materials from the best providers in their field. The construction wood is dried indoors and sorted by solidity. We use PAROC mineral wool for insulation. The windows and doors are ordered from the best manufacturers in Estonia.

### **Quick erecting**

A mid-sized KONECTA HOME house can be roofed and made weatherproof in 3-5 days. As the windows have already been installed in factory and by request covered with coloured wooden covering, the exterior of the house is practically ready after assembling the elements. Such technology allows us to build in winter as well.
